
Crysis on notebook

Posted by nsood3 - 2007/07/29 17:39

I'm sorry to ask this here, but i am purchasing a laptop. i will be using it for gaming as well as my college needs. i really have no idea about notebook specs so forgive me if this post sounds really nooby. the laptop specs are as follows

Intel® Core™ 2 Duo Processor T7400 2.16GHz 4MB Cache 667MHz FSB
Dual 512MB NVidia® GeForce™ Go 7950 GTX - SLI Enabled
2GB Dual Channel DDR2 SO-DIMM at 667MHz - 2 x 1024MB

I've been told that it should run Crysis but i want your opinions as you have experience in these matters. Again im sorry for the question and thank you all for any answers

Today Is The First Day Of The Rest Of Your Life.....
Enjoy !!!

Imo I wouldn't waist your money on that. Wait till DX10 compatible mobile video cards come out.

Just like guys above me said, just wait for notebooks with dx10 (or even better dx 10.1). Now you can easily find them with 8600 GT, but this won't be enough for crysis. Hope that soon there will be some notebooks with go 8800 avaiable, or 9800 (because maybe some of manufactures wait for better graphics).

Or maybe try ASUS XG Station, at least try find it. Never seen it anywhere in shops ;/

i'm am going to buy an notebook in near future..
I was thing to buy this one :

I am an link

I know the 8400 isn't the best gaming card out there but i want DX10 and my budget is 1000(¬) max...

Any sugestions, or somthing to say about it :P ?

Re:Crysis on notebook

Hmm, you can always buy ASUS XG Station in future + 8800GTX :D
Personally I wouldn't buy Packard Bell, maybe because this brand isn't popular in Poland at all.
If you asked me, I would say chose ASUS. You can even get a better graphics for this price.

But anyway, this lap is ok, but graphics not, so don't expect fireworks :)

EDIT: @ASUS XG Station. Don't know why but it seems that there isn't any of these in shops ./ Weird, because they should be.

Rly good choice for this price !

Re:Crysis on notebook

Posted by james24 - 2007/09/14 01:33

the 8600 is a really underpowered card, even more so on laptops... Id wait a while, if not id go for a 7950gtx its got far more grunt than the 8600 and id bet it would look better at decent dx9 than jutterly low dx10.

save the dosh unless you really need a laptop.

Re:Crysis on notebook

Posted by truly - 2007/09/14 16:52

You are right. But well, 7950gtx is on MXM IV and in smaller laptops there is no III and IV type slots, and even place for needed cooling system.
If I need laptop this will be for sure 15,4" because of mobility I need on university ;/

And second thing is that 17" with 7950 are rly expensive.

Buying a notebook for Crysis isn't the best move you can do. If you rly don't need lap, go for desktop and 8800GTS/2900XT.
