
NVIDIA ForceWare 169.09 for Crysis released

Posted by XxR3zD3ViLxX - 2007/11/14 20:50

There is some good news for some of you SLI users and Crysis players in general, ForceWare 169.09 is out; it supports SLI for Crysis.

Notes:

- * Beta driver for GeForce 6, 7, and 8 series GPUs.
- * Recommended driver for Crysis.
- * Several game and application compatibility fixes. Please read the release notes for more information on product support, features, driver fixes and known compatibility issues.

This driver:

- o Adds SLI support for Crysis
- o Fixes a water reflection bug in Crysis
- o Adds Control Panel anisotropic filtering support for Crysis

With this driver, SLI will deliver 40-50% speedup over a single GPU for Crysis. In addition, Crytek will release a patch in the next week or two that will improve SLI performance further.

Download:

ForceWare 169.09 XP 32-bit
ForceWare 169.09 XP 64-bit
ForceWare 169.09 Vista 32-bit
ForceWare 169.09 Vista 64-bit

Hope this improves performance!, come back with results if you want :P

It looks that now nv and ati have almost same image quality. + nvidia will increase performance again. But ... there is so few 8800GT available ;/

Sli performance ... and new graphic drivers.

That's what Crossfire lacks of.

Ati need to relase new drivers, because there is no performance in crysis when card work in crossfire mode.

P.S. Maybe Crysis don't have crossfire mode(profile) also ? (like Sli)

P.S.2. I wait for some tests ! :D

those Nvidia Drivers maybe are good for Crysis but in mean time they will slow down different games performance !

About SLI and crossfire, i think same as for SLI you can activate crossfire manually in your ini file !

Yes thats the problem when they focus the drivers to just one or two games...it pop up many errors in other games..

And Happy Birthday to myself :lol: Dont think im gonna get a Ferrari this year neither :(

In Full game it should all work automatically, all we need now is a New Ati Drivers for crossfire , I really hope they will release them soon, i don't like the glitches i get sometimes!

Hm, I've got a problem with crysis thats probably with the graph card. Because i can't see any textures on the building, water, weapon etc. Except for the terrain.

But when I try to install the 64bit version it says this:

<http://img240.imageshack.us/img240/2463/64bitmo8.jpg>

Does anyone know this issue? Or knows how to fix it?

Thanks in advance

Hey oldey welcome to the forums, Well, regarding that issue u can head over here u may find a soultion for the texture problem, but If u provide more info like system ur running (OS- ?bit), gfx card, cpu, and more info on ur rig, but that message came coz obviously ur installing the vista 64-bit drivers on a non-64 vista system. So plz provide more info about ur system and rig, and come bak if that solution page didnt help!

Oke, sorry about that.

AMD Athlon 64 X2 Dual processor 4200+
2 gb RAM
nvidia 8600 GeForce GT

Oke, i'm checking some of those solutions. Thanks for that link

Windows Professional
Service Pack 2 yes but is it 32bit or 64 bit ? Check it i have feeling and i am quite sure that it is 32bit it would explain your error mate ;)
