they released xbox360 demo in 12th august and soon they will release demo for pc also. unfortunately bioshock demo wont tell us if our computers are ready for crysis becuse crysis needs lots of more computing power to run the game smoothly BECUSE bioshock is in-room game and crysis out-room game.

anyways i'm waiting the demo to test it out. i don't really like the game becuse it seems pretty complicated... not becuse im dumb :P but i like fast FPS's

Well it comes close to the same specs (not jet out offcourse)
but crysis will be just a bit more power

I like it, its a bit wierd somtimes, but i'm a grafic whore :P

Lets see what the demo brings and then maybe buy it ;)

edit= I have played the demo and i am i little disappointed.

I thoght it would look a little as crysis (grafics)

The grafics where like doom 3 somtimes, and i also think

the fissics sucks. And the enginge sucks also (unreal)

many things have that "plastic" look over them...

If you want to play it :

Goto: <http://chonnom0.filezaru.com/BioShockPCDemo.zip>

But to make it speed up you can download if you have a very good connection(T1,cable...) download getbot from below link and after inserting download link press & hold 'G' and then Right-Click repeatedly to make new connections that increase your speed dramatically!

<http://www.getbot.com/>

yeah i read some stuff in different forums around 75% of players who played Demo were a bit disappointed, but i will try it anyway's this weekend when i will have my Vista and 2900XT installed !

here are some BioShock Launch party pics if you wanna have a look !
